

A photograph of a modern industrial factory floor. In the foreground, two large orange robotic arms are positioned over a production line. The arms are equipped with various sensors and cables. The background shows a complex network of machinery, conveyor belts, and structural elements of the factory, all under bright industrial lighting.

Constructa

Leaders in Custom Factory Automation

Since 1984 we have been designing and building custom industrial automation systems for companies that want to grow, produce better, and compete more effectively.

Who we are

Constructa Sistemi was founded in Forlì in 1984, and for over forty years has been designing and building industrial automation systems for companies looking to improve the productivity and quality of their production processes.

Our story began in the home appliances sector, where we became a reference point for leading international players. Over time we have extended our expertise and technologies to other sectors as well, building a working model capable of adapting to complex industrial processes.

Today we are a recognized partner in the integration of robotic and automated solutions for manufacturing industry: turnkey systems, designed around the client's real needs and supported all the way through to full operation.

Active since

1984

Number of plants

500+

Countries served

Active clients

100+

Export share

60%

Size of our facility

3000mq

They chose us

Among our clients we can count the delivery of plants for companies such as Electrolux, Haier, Whirlpool, Ferrari, Pirelli, Candy, Beko, Smeg, Bonfiglioli, Marcegaglia, DeLonghi, Elica, Franke, Fisher&Paykel, Spal Automotive, Johnson Electric, La Fortezza, Isoclima, Mec3, Surgital, Grandi Pastai Italiani, Kaercher, Roncato and many others.

Our solutions

We design and build industrial automation lines and cells with a high degree of customization, synergistically integrating robotics, vision systems, automation, and application software development. Every solution starts from an analysis of the production process and is configured to match your operational needs.

Customized Robotic Cells

Robotic cells customized to the client's needs.

Gluing Applications

Automatic gluing and silicone application systems for high precision processes.

Robotized Handling

Robotic systems for moving and handling parts in industrial and logistics settings.

Automated Assembly Systems

Complete automated assembly lines or cells.

Automatic Screwing

Controlled and traceable automated screwing.

Collaborative Robots

Integrated testing lines and quality control.

Automatic Testing

Robotic systems for end of line and internal logistics.

Palletizing/Depalletizing

Robotic systems for end of line and internal logistics.

Artificial Vision

Artificial vision systems for quality control, robot guidance, metrology and more.

Robotized Packaging

Automated solutions for industrial packaging.

The sectors we work in

Constructa's solutions are applied across numerous industrial sectors, all sharing the need for reliable, controlled, and highly efficient production processes:

Home Appliances

Food & Beverage

Automotive

Energy & Environment

Logistics

Pharmaceutical

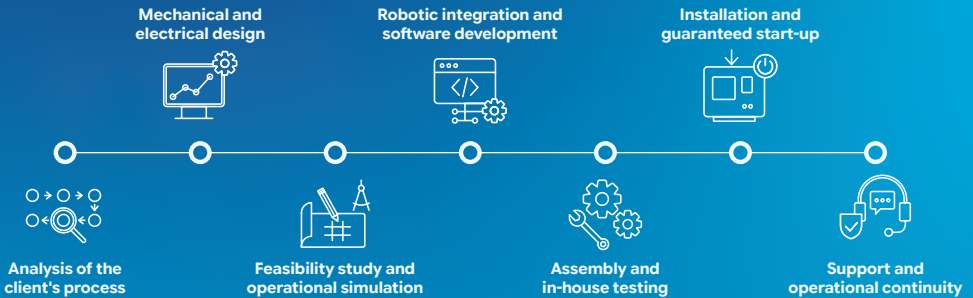

Metalworking

Can't find your sector? Contact us and let's find out if we can help.

Our way of working

Every project we manage starts from a structured, progressive process. We integrate mechanical, electrical, and software expertise within a journey that guides the client from initial analysis through to post-installation support.

Why choose Constructa

1

Tailor-made solutions, no compromises

Every plant is designed around the client's real needs, to maximize performance and production efficiency.

2

Consolidated experience and continuous innovation

Since 1984 we have been developing industrial automation solutions, with proven experience and cutting-edge technologies.

3

Complete, reliable technology integration

Robotics, vision, material handling, and control are integrated into coherent systems, designed to ensure continuity and reliability.

4

Performance, flexibility, and partnership

We increase productivity and quality, reducing scrap, errors, and cycle times, with flexible solutions ready to evolve.

Start with a free analysis

Tell us about your production process. Together we'll analyze automation opportunities and propose the most effective solution for you, with no
